VIRTUAL TOURS FOR MAXIMUM IMPACT

STREET VIEW GOES INSIDE

Virtual Tours (V/T's) have been exploding since Google started them with the Street View program. Since 2007, it has expanded from street perspectives to off-road corridors and Business View indoor tours.

As a Certified Google Business View Photographer, I can shoot any non-residential business for Google Maps. For residential virtual tours, such as real estate sales, I can embed them on websites. These images also can be used with a V/R headset.

The camera is mounted on a robotic tripod. The robot and a DSLR camera produce life-like 360° x 180° panoramas. Up to 54+ HDR images are stitched together with a sophisticated software, producing a high-resolution photo spheres free of distortion. Tours are made by shooting a series of perspectives.

FORT NEGLEY VISITOR CENTER

VIRTUAL TOUR PHOTOGRAPHER SKILLS

Interior panoramas are complex to produce. They must be shot in a manual camera mode with no auto-focus. There are many photographic challenges including lighting, exposure and proximity to close objects that cause distortion. My system fixes this, combined with a sophisticated photo stitching software.

AUGMENTED REALITY

Up to 28,000 pixel wide, sphere's are so detailed that you can zoom into a scene and read incredible detail. Additional informational "hot-spots" can be included to feature details of objects in the panorama. Audio, video and web links embeds can be placed in these tours as well.

BLUEPRINTS TO VIRTUAL TOURS

Create 3D Virtual Tours from Blueprints: Affordable interior virtual tours for construction projects, from Blueprints to 3D. Perfect for new construction plans, planned renovation projects, restricted access interiors or structures that have been destroyed. These tours are extremely affordable and a fraction of the cost of a live shoot.
